Here are some HTTPS web services that offer AI-based automatic radio show creation through text input:
1. Google Cloud Speech-to-Text API - This service can transcribe audio and video files, as well as real-time speech, into text format. It uses machine learning to improve its accuracy over time.
2. Amazon Transcribe - Another cloud-based speech recognition service that can convert audio and video files into text. It also supports multi-language transcription and custom models for specific domains or industries.
3. Microsoft Azure Speech Services - This platform provides a range of speech-related services, including speech synthesis, language understanding, and voice recognition. It uses machine learning algorithms to improve accuracy over time.
4. IBM Watson Speech-to-Text API - A cloud-based service that can transcribe audio files into text format in multiple languages. It also supports custom models for specific domains or industries.
5. OpenAI's GPT-3 - This is an advanced language model that can generate human-like responses to text inputs, making it possible to create radio shows based on user prompts.W
